

1. Take two modules...

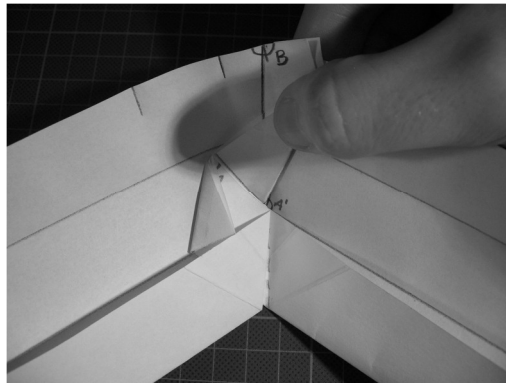

2. And put the flap in the pocket

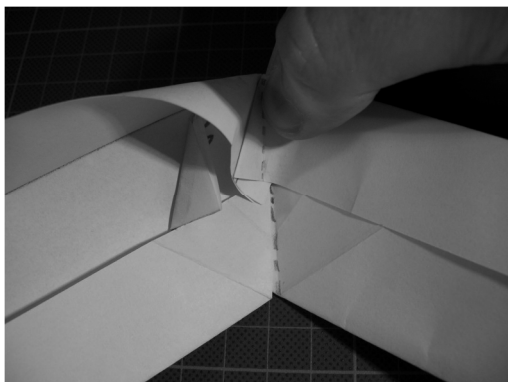

3. Now align carefully...

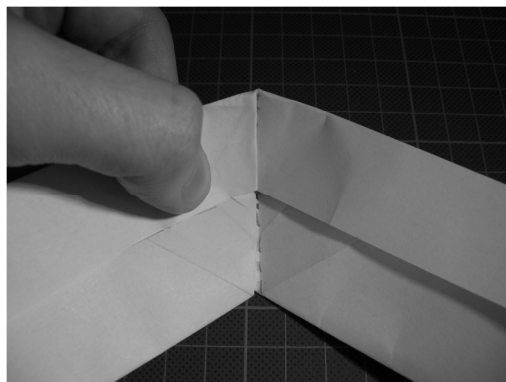

4. And fold the small right flap with both modules together

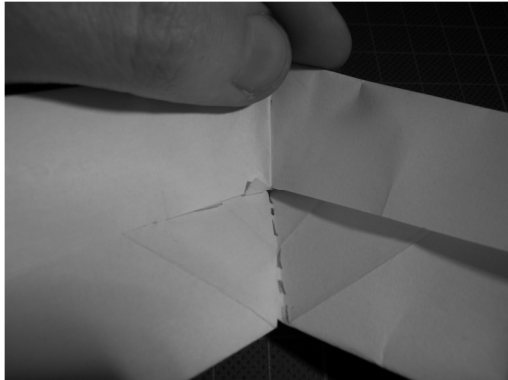

5. Now close the right module.
Do not let the layers separate

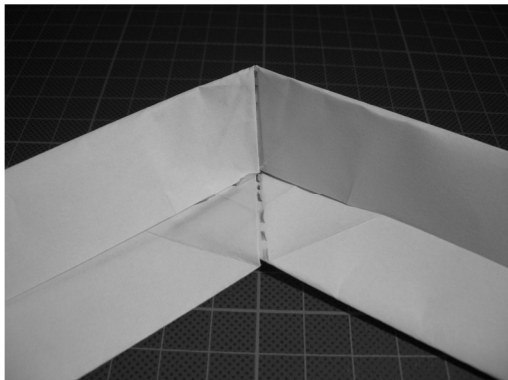

6. Carefully close the left module using the
existing creases.

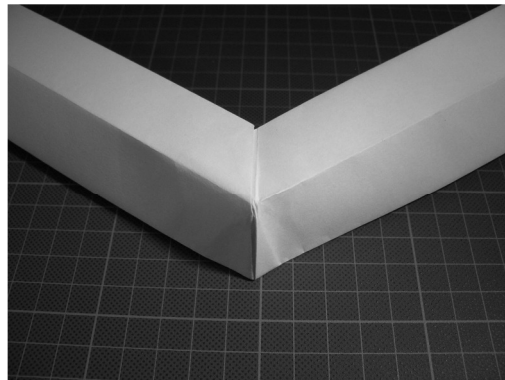

7. Fold the overlapping bit back to lock the closed module.

Inside

Outside

Now go on and assemble the model. Join 5 modules together for a ring. Then weave the next ring into the first one and so on.

It becomes increasingly difficult to keep the orientation. Always keep the symmetry in mind when looking onto a corner of the model.
